EDUCATION

University of Electronic Science and Technology of China (UESTC)

Sep 2023 — Jun 2026

Master in Computer Science and Technology

Cumulative GPA: 3.62/4.00

Co-advised by Xiaoshuang Shi and Kaidi Xu

Chongqing University of Posts and Telecommunications (CQUPT)

Sep 2019 — Jun 2023

Bachelor in Internet of Things Engineering (Hons)

Cumulative GPA: 3.65/4.00 (Rank 1/153)

RESEARCH

a. Know when to trust GenAI outputs:

1. WSE calibrates predictive entropy by assessing semantic relevance at both the word (token) and sentence levels, highlighting the weights of keywords and highly consistent sentences in uncertainty quantification.

b. Statistical guarantees via conformal prediction:

1. ConU assumes each sampling set contains at least one admissible response and develops the nonconformity score by correlating it with the uncertainty of reliable semantics within the sampling set of each calibration data point, ensuring user-specified coverage of admissible responses in open-ended scenarios for the first time.
2. TRON proposes a conformal score for calibrating sampling size, limiting the average probability that sampling sets fail to cover admissible responses. It then develops the nonconformity score based on semantic frequency, rigorously controlling the miscoverage rate by two user-defined risk levels.
3. SConU maintains the integrity of the calibration set and introduces the notion of minimum risk level. It also develops two selective conformal p-values to assess exchangeability through significance tests, providing finite-sample guarantees for filtered test samples in interdisciplinary contexts.
